SUMMARY

Computer Science undergraduate at Mar Athanasius College of Engineering with a strong foundation in cybersecurity, full-stack development, and applied AI. Delivered production-grade projects spanning security tooling, web platforms, and mobile applications. Co-organised technical events as IEEE Vice Chair and led Lumora'26, an 18-hour design hackathon under GDGoC MACE, end-to-end.

EDUCATION

Mar Athanasius College of Engineering Kothamangalam, Kerala
B.Tech in Computer Science and Engineering Sep 2023 – June 2027
– Relevant Coursework: Data Structures, Operating Systems, DBMS, Computer Networks, Compiler Design

EXPERIENCE

Cybersecurity Research Intern 2026
IIT Kottayam Kottayam, Kerala
– Completed a one-month research internship focused on image forensics, researching methodologies to prevent and detect image laundering in AI/diffusion-generated content.
Computer Hardware and Networking Technician May 2023 – Sep 2023
Cirus Computers Kothamangalam, Kerala
– Improved system reliability by diagnosing hardware bottlenecks, resolving thermal failures, and replacing faulty components across custom desktop builds.
– Set up small-scale LANs and Wi-Fi networks; handled IP configuration, subnetting, and basic firewall rules.

PROJECTS

MiragePot – AI-Powered SSH Honeypot | *Python, Docker, Prometheus, Grafana* | [GitHub](#) 2025 – 2026
– Built a fake SSH server that accepts any login and uses a local LLM (Phi-3 via Ollama) to generate believable terminal responses, trapping and studying real attackers without exposing actual systems.
– Detects attacker techniques mapped to **MITRE ATT&CK** tactics in real time; logs full session activity to a live dashboard. Containerised with Docker; 15,000+ lines of Python, 566 tests at 100% pass rate. Submitted as B.Tech Mini Project.
Med-Secure-Mind – AI-Driven Online Doctor | *React, TypeScript, TailwindCSS* | [GitHub](#) 2025
– Web app that takes a user's symptoms and estimates how urgent their condition is (from low risk to emergency), suggesting likely conditions and next steps using an AI-based scoring pipeline.
– Attempts in-browser inference via Bio.ClinicalBERT over WebGPU; if the model fails to load, the app automatically falls back to deterministic rule-based scoring so it never breaks.
– Presented at **IEEE Yess'25, TechXbit, NIT Calicut** as part of the IEEE Computer Society project showcase.
BEACON – Anti-Drug Addiction App | *Flutter, Firebase* | [GitHub](#) 2025
– Mobile app designed to support people recovering from addiction through daily challenges, milestone tracking, and motivational streaks. Integrated Firebase for authentication, real-time data, and push notifications.
VulnTracker – Security Dashboard | *React, Flask, Supabase* | [GitHub](#) 2024 – 2025
– Full-stack tracker mapping CVEs/CVSS severity to software, linking exploit threats, and managing patches with resolution notes.
– JWT-authenticated Flask API with role-based access, rate limiting, and Swagger docs; React/Tailwind frontend.

VOLUNTEERING & LEADERSHIP

Vice Chair, Computer Society Mar 2025 – Present
IEEE Student Branch, MACE Kothamangalam, Kerala
– Represented the Computer Society at **IEEE Yess'25, TechXbit, NIT Calicut**; led CSE dept. activities at **Takshak'25** tech fest.
– Volunteered for **.hack()'25** — handled venue setup, technical coordination, and programme execution.
Program Committee Executive Member Sep 2025 – Present
GDGoC MACE Kothamangalam, Kerala
– **Event Lead, Lumora'26** — planned and executed an 18-hour design hackathon, managing problem statements, participants, judges, and logistics end-to-end.
Computer Science Dept. Head, Takshak'25 Tech Fest 2025
Mar Athanasius College of Engineering Kothamangalam, Kerala
– Led all technical and event-related activities for the CSE department during the annual tech fest Takshak'25.

TECHNICAL SKILLS

Languages: Python, C/C++, Java, JavaScript/TypeScript, SQL, Bash
Frameworks & Libraries: React.js, Flask, TailwindCSS, Spring Boot, Paramiko, pytest, PyTorch
DevOps & Tools: Docker, Prometheus, Grafana, Git, Ollama, Vim/Neovim
